#### Minimum dimensions

The filter is relatively small (241x45) and can be therefore installed underneath the kitchen sink.

*Dimensions in mm.*

#### Easy replacement

The filter is easily interchangeable, just unscrew the empty container and tighten the new one in its place. The shut-off valve can remain open.

#### Sustainable

We recommend changing the filter every 6 months and disposing of the old one in the non-organic waste bin. The spare can be purchased directly from any Roca distributor.

#### The best way to save

Syra-F is a safe investment. It is a more economic option than the annual expenditure in bottled water and provides additional comfort and practicality.

Experts recommend drinking a minimum of two liters of water per day. However, if 5 liters of water are required to produce a 1-liter bottle, **can you imagine the environmental and economic impact this has?**

At Roca we wish to contribute to the reduction of the carbon footprint and pollution produced by the manufacturing of plastic containers. We have therefore designed a kitchen faucet that features a triple filtration process to obtain high-quality, fresh and healthy water, without chlorine taste or odor. Thus, you will keep yourself hydrated at home while caring for the environment.

## Filter cartridge

Unfiltered water inlet

Step 1

#### Prefiltration

A polypropylene membrane retains sediments, rust and other solid suspended particles larger than 5 microns to obtain cleaner water.

Step 2

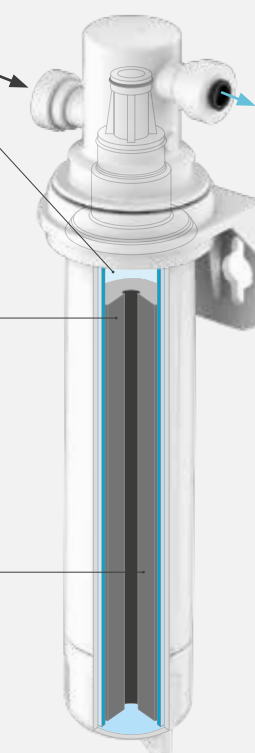

#### Chlorine removal

The activated carbon filter improves the quality of water, removing the chlorine odor and taste, as well as other organic pollutants.

Step 3

#### Microfiltration

The activated carbon filter retains invisible particles larger than 0.5 microns and removes microorganisms to provide pure and healthy water.

Fresh, healthy and refreshing water flow, without chlorine odor or taste

#### Healthy

High-quality drinking water with no chlorine odor or taste.

#### Eco-friendly

Sustainable alternative to plastic bottles.

#### Instantly

Healthy water directly from the tap simply by turning the lever.

#### Economical

Filtering capacity of 4,000 water liters per cartridge.

#### Easy to maintain

The filter cartridge can be replaced in less than 10 seconds.

#### Ideal for cooking

Cleaner water without any substances like chlorine that affect food taste.
